

# LIST OF CONTENTS

## VOLUME 40

### NUMBERS 1 to 4

- |   |   |
|---|---|
| <b>G. Moon and G.-P. Kim</b>  | <b>1</b> Effects of relocation to AS/RS storage location policy with production quantity variation  |
| <b>C.-X. (. Feng, J. Wang and J.-S. Wang</b>                          | <b>15</b> An optimization model for concurrent selection of tolerances and suppliers  |
| <b>M. Starbek and J. Grum</b>   | <b>35</b> Control of the state of orders on machines  |
| <b>G. R. Weckman, R. L. Shell and J. H. Marvel</b>                    | <b>51</b> Modeling the reliability of repairable systems in the aviation industry   |
| <b>H. Seifoddini and M. Djassemi</b>                                  | <b>65</b> The effect of reliability consideration on the application of quality index   |
| <b>R. J. Kuo, S. C. Chi and P. W. Teng</b>                            | <b>79</b> Generalized part family formation through fuzzy self-organizing feature map neural network  |
| <b>S. N. Sánchez, E. Triantaphyllou, D. B. Webster and T. W. Liao</b> | <b>101</b> A study of the total inventory cost as a function of the reorder interval of some lot-sizing techniques used in material requirements planning systems |
| <b>C. H. Cheng, C.-H. Goh and A. Lee</b>                              | <b>117</b> Designing group technology manufacturing systems using heuristics branching rules  |
| <b>T. Lacksonen</b>   | <b>133</b> Empirical comparison of search algorithms for discrete event simulation  |
| <b>M. Gopalakrishnan, S. Mohan and Z. He</b>                          | <b>149</b> A tabu search heuristic for preventive maintenance scheduling  |
| <b>S. Wang</b>  | <b>161</b> A hybrid threshold curve model for optimal yield management: neural networks and dynamic programming   |
| <b>E. Guerra and J. R. Villalobos</b>                                 | <b>175</b> A three-dimensional automated visual inspection system for SMT assembly  |
| <b>H. Zhou, Y. Feng and L. Han</b>                                    | <b>191</b> The hybrid heuristic genetic algorithm for job shop scheduling   |
| <b>T. W. Leung, C. H. Yung and M. D. Troutt</b>                       | <b>201</b> Applications of genetic search and simulated annealing to the two-dimensional non-guillotine cutting stock problem                                     |
| <b>L. Xinmin, L. Zhongqin, H. tian and Z. Ziping</b>                  | <b>215</b> A study of a reverse engineering system based on vision sensor for free-form surfaces  |
| <b>W.-Y. Liang and P. O'Grady</b>                                     | <b>229</b> OODS: an object-oriented design system an example of electronics assemblies  |

- W. K. Ching**
- B. Das and A. Garcia-Diaz**
- T. O. Lee, Y. Kim and Y. K. Kim**
- T. S. Loh, S. T. S. Bukkapatnam,  
D. Medeiros and H. Kwon**
- C.-S. Cheng and S.-S. Cheng**
- A. Monga and M. J. Zuo**
- L.-Y. Ouyang and B.-R. Chuang**
- P.-C. Chang and L.-H. Su**
- A. Kamrani, W. Rong and R. Gonzalez**
- R. Hall, M. Dessouky and Q. Lu**
- 249** Optimal  $(s, S)$  policies with delivery time guarantees for manufacturing systems with early set-up
- 259** Factor selection guidelines for job evaluation: A computerized statistical procedure
- 273** Two-sided assembly line balancing to maximize work relatedness and slackness
- 293** A genetic algorithm for sequential part assignment for PCB assembly
- 309** A neural network-based procedure for the monitoring of exponential mean
- 323** Optimal design of series-parallel systems considering maintenance and salvage value
- 339** Mixture inventory model involving variable lead time and controllable backorder rate
- 349** Scheduling  $n$  jobs on one machine to minimize the maximum lateness with a minimum number of tardy jobs
- 361** A genetic algorithm methodology for data mining and intelligent knowledge acquisition
- 379** Optimal holding times at transfer stations
